                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Description

New isolated polypeptide having a vertebrate HMG A box, useful for inhibiting a condition associated with an activated inflammatory cytokine cascade, e.g. endotoxic shock, myocardial infarction, asthma, HIV infection, malaria and diabetes.

Example 4; Page 45; 82pp; English.

The invention relates to high mobility group (HMG) protein comprising DNA binding motifs termed HMG A box and HMG B box. HMG A box or a non-

```
ö
              cytokine from a vertebrate cell. The methods and compositions of the invention are useful for inhibiting a condition characterised by activation of an inflammatory cytokine cascade such as endotoxic shock, rheumatoid arthritis, appendicitis, peptic or duodenal ulcers, Crohn's disease, peritonitis, hepatitis, asthma, allergy, immune complex disease, sinusitis, bronchitis, emphysema, HV infection, candidiasis, malaria, filariasis, amoebiasis, dermatitis, therosclerosis, Alzheimer's disease, myocarditis, myocarditis, meningitis, multiple sclerosis, gout, erefebral infarction, neuritis, Goodpasture's syndrome, graft-versus-host disease, diabetes and Hodgkin's disease. The invention is useful in gene therapy. The present sequence is human HMG1 (also termed as HMGB1) B box
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New pharmaceutical composition comprises a polypeptide comprising an HMGB B box or its functional variant, useful for stimulating or increasing an immune response in an individual or for treating cancer in an individual.
naturally occurring HMG A box inhibits the release of a pro-inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes a pharmaceutical composition comprising a polypeptide comprising an HMGB (high mobility group box) B box or its functional variant to treat a disease or condition by increasing an immune response in an individual administered with the pharmaceutical composition. Also described are: an antibody attached to a polypeptide comprising an HMGB B box or its functional variant; stimulating or increasing an immune response in an individual in need of
                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cytostatic; gene therapy; vaccine; pharmaceutical composition; HMGB B box, high mobility group; immune response; immunostimulation; cancer; human, high mobility group box 1; HMG1; cytokine activity; TNF stimulating; tumour necrosis factor stimulating.

immunostimulation, and treating cancer in an individual. The composition is useful for stimulating or increasing an immune response in an individual in need of immunostimulation or for treating cancer in an individual. This is the amino acid sequence of tumour necrosis factor

```
The invention relates to a polypeptide comprising a high mobility group box protein (HMGB) A or B box. The HMGB A or B box can inhibit release of a proinflammatory cytokine from a cell treated with an HMGB protein. The invention also relates to a purified preparation of antibodies that specifically bind to the HMGB B box but do not specifically bind to non-B box epitopes of HMGB, where the antibodies can inhibit release of a proinflammatory cytokine from a cell treated with HMGB, a method for effecting weight loss or treating obesity in a patient, a method of composition comprising an HMGB protein or an antibody that binds to the protein, an agent that inhibits TMF biological activity and a method of composition comprising an HMGB protein or an antibody that binds to the protein, an agent that inhibits TMF biological activity and a method of inflammatory cytokine cascade. Effecting weight loss or treating obesity in a patient comprises administering to the patient an amount of the collypeptide. The polypeptide, antibodies, composition and methods are useful in treating obesity and conditions characterised by activation of an inflammatory cytokine cascade, e.g. sepsis, allograft rejection,
                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; high mobility group box 1 B box; HMGB1 B box; HMGB; HMGB A box, HMGB B box; proinflammatory cytokine; weight loss; obesity; inflammation; inflammatory cytokine cascade; sepsis; allograft rejection; rheumatoid arthritis; asthma; lupus; adult respiratory distress syndrome; chronic obstructive pulmonary disease; psoriasis; pancreatitis; peritonitis; burn; myocardial ischaemia; organic ischaemia; reperfusion ischaemia; Baccet si disease; graff-versus-host disease; Crohn's disease; ulcerative colitis; multiple sclerosis; cachexia.

The invention relates to high mobility group (HMG) protein comprising DNA binding motifs termed HMG A box and HMG B box. HMG A box or a non-naturally occurring HMG A box inhibites the release of a pro-inflammatory cytokine from a vertebrate cell. The methods and compositions of the invention are useful for inhibiting a condition characterised by activation of an inflammatory cytokine cascade such as endotoxic shock, rheumatoid arthritis, appendicitis, peptic or duodenal ulcers, Crohn's

         sinusitis, bronchitis, emphysem, HIV infection, candidisais, malaria, filariasis, amoebiasis, dermatitis, atherosclerosis, Alzheimer's disease, myocarditis, myocarditis, myocarditis, myocarditis, myocarditis, moritis, goodpasture's myotane, garaft-versus-host disease, diabetes and Hodgkin's disease. The invention is useful in gene therapy. The present sequence is human HMG1 (also termed as HMGB1)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes a pharmaceutical composition comprising a polypeptide comprising an HMGB (high mobility group box) B box or its functional variant to treat a disease or condition by increasing an immune response in an individual administered with the pharmaceutical composition. Also described are: an antibody attached to a polypeptide comprising an HMGB B box or its functional variant; stimulating or increasing an immune response in an individual in need of immunostimulation, and treating cancer in an individual. The composition is useful for stimulating or increasing an immune response in an individual. The composition individual in need of immunostimulating or increasing an immune response in an individual. This is the amino acid sequence of a human high mobility group box 1 (HMG1) B box mutant.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes a pharmaceutical composition comprising a polypeptide comprising an HMGB (high mobility group box) B box or its functional variant to treat a disease or condition by increasing an immune response in an individual administered with the pharmaceutical composition. Also described are: an antibody attached to a polypeptide comprising an HMGB B box or its functional variant, sitimulating or increasing an immune response in an individual in need of immunostimulation, and treating cancer in an individual. The composition is useful for stimulating or increasing an immune response in an individual in need of immunostimulation or for treating cancer in an individual in need of immunostimulation or for treating cancer in an individual. This is the amino acid sequence of human high mobility group box 1 (HMGI) B box biologically active fragment.

(CRIT-) CRITICAL THERAPEUTICS INC.

sapiens.

```
The invention relates to a polypeptide comprising a high mobility group box protein (HMGB) A or B box. The HMGB A or B box can inhibit release of a proinfilammatory cytokine from a cell treated with an HMGB protein. The invention also relates to a purified preparation of antibodies that specifically bind to the HMGB box but do not specifically bind to non-B box epitopes of HMGB, where the antibodies can inhibit release of a proinfilammatory cytokine from a cell treated with HMGB, a method for effecting weight loss or treating obesity in a patient, a method of determining whether a compound inhibits inflammation, a pharmaceutical composition comprising an HMGB protein or an antibody that binds to the protein, an agent that inhibits TMF biological activity and a method of treating a condition in a patient characterised by activation of an inflammatory cytokine cascade. Effecting weight loss or treating obseity in a patient comprises administering to the patient an amount of the polypeptide. The polypeptide, antibodies, composition and methods are useful in treating obseity and conditions characterised by activation of a polypeptide. The polypeptides and conditions characterised by activation of a cuseful in treating obseity and conditions characterised by activation of

The invention relates to a polypeptide comprising a high mobility group box protein (HMGB) A or B box. The HMGB A or B box can inhibit release of a proinflammatory cytckine from a cell treated with an HMGB protein. The invention also relates to a purified preparation of antibodies that specifically bind to the HMGB B box but do not specifically bind to non-B box epitopes of HMGB, where the antibodies can inhibit release of a proinflammatory cytokine from a cell treated with HMGB, a method for effecting weight loss or treating obesity in a patient, a method of determining whether a compound inhibits inflammation, a pharmaccutical compressing an HMGB protein or an antibody that binds to the protein, an agent that inhibits TMF biological activity and a method of treating a condition in a patient characterised by activation of an inflammatory cytokine cascade. Effecting weight loss or treating obesity in a patient comprises administering to the patient an amount of the polypeptide. The polypeptide, antibodies, composition and methods are useful in treating obesity and conditions characterised by activation of such and conditions characterised by activation of an apatient characterised by activation of the polypeptide. The polypeptide and conditions characterised by activation of
                                                                                                                   Human; high mobility group box B box; HMGB; HMGB A box; HMGB B box; proinflammatory cytokine; weight loss; obesity; inflammation; inflammation; inflammatory cytokine cascade; sepsis; allograft rejection; rheumatorid arthritis; asthma; lupus; adult respiratory distress syndrome; chronic obstructive pulmonary disease; psoriasis; pencreatitis; reperitorits; burn; myocardial ischaemia; organic ischaemia; reperfusion ischaemia; Behcet's disease; graft-versus-host disease; Crohn's disease; ulcerative colitis; multiple sclerosis; cachexia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New high mobility group box proteins, useful in treating obesity, sepsis, rheumatoid arthritis, asthma, psoriasis, burns, myocardial ischemia, Behcet's disease, ulcerative colitis, multiple sclerosis, or cachexia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 rheumatoid arthritis, asthma, lupus, adult respiratory distress syndrome, chronic obstructive pulmonary disease, psoriasis, pancreatitis, peritonitis, burns, myocardial ischaemia, organic ischaemia, reperfusion ischaemia, Behcet's disease, graft-versuse host disease, Crohn's disease, ulcerative colitis, multiple sclerosis or cachexia. This sequence represents a human HMGB B box polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               an inflammatory cytokine cascade, e.g. sepsis, allograft rejection,
Human high mobility group box (HMGB) B box protein #3
```

```
The invention is based on the discovery that high mobility group box protein 1 (HMGB1, also known as high mobility group-1 or HMG1), when administered with an antigen, diminishes the antibody response to the administered antigen. HMGB1 has 2 DNA binding motifs, termed the A and B boxes. A claimed method of treating an immune pathology in an individual comprises administering a HMGB polypeptide comprising a vertebrate HMGB A box, or an immunesuppressive fragment of the vertebrate or non-natural HMGB A box. The immune pathology is induced by the administration of a non-human antigen, non-adjuvant to the individual, by the transplantation of an organ into the individual, or by infection from a microorganism. Claimed methods of individual, or by infection from a microorganism. Claimed methods of pathology in an individual or decreasing an immune pathology, inhibiting an immune pathology in an individual or decreasing an immune response to an administered non-human antigen comprise administering a HMGB A box, or an immunosuppressive fragment of the vertebrate or non-natural A box.

Comprises administering a HMGB polypeptide comprising a vertebrate HMGB A box, or an immunosuppressive fragment of the vertebrate or non-natural HMGB B cox, an ann-maturally-occurring HMGB B cox, an animunosuppressive fragment of these, and a vertebrate or non-naturally boccurring HMGB B cox. The HMGB polypeptide is preferably a HMGBI peptide and may be truncated at the C-terminus. The autoimmune disease is allergy, ulcerative colitie, Crohn's disease, asthma, rheumatoid arthritis, ulcerative colitie, crohn's disease, asthma, rheumatoid arthritis, sequence is that of the B box of human HMGILIO, a HMGB protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Treating an immune pathology in an individual comprises administering an amount of a high mobility group box (HMGB) polypeptide comprising a vertebrate or a non-naturally occurring HMGB A or B box, or its

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           protein 1 (HWGB1, also known as high mobility group-1 or HWG1), when administered with an antigen, diminishes the antibody response to the administered antigen. HWGB1 has 2 DNA binding motife, termed the A and B boxes. A claimed method of treating an immune pathology in an individual comprises administering a HWGB polypeptide comprising a vertebrate HWGB A box, or an immunesuppressive box, a non-naturally-occurring HWGB A box, or an immunesuppressive pathology is induced by the administration of a non-human antigen, nonself material (e.g. a cell or tissue such as bone marrow cells) or self material (e.g. a cell or tissue such as bone marrow cells) or adjuvant to the individual, by the transplantation of an organ into the individual, or by infection from a microorganism. Claimed methods of protecting a subject against an immune pathology, inhibiting an immune pathology in an individual or decreasing an immune response to an administered non-human antigen comprise administering a HWGB polypeptide comprising a vertebrate HWGB A box, a non-naturally-occurring HWGB A box,
                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Treating an immune pathology in an individual comprises administering an amount of a high mobility group box (HMGB) polypeptide comprising a vertebrate or a non-naturally occurring HMGB A or B box, or its

A claimed method of treating an autoimmune disorder in an individual comprises administering at HMGB polypeptide comprising a vertebrate HMGB box, a non-naturally-occurring HMGB A box, or an immunosuppressive fragment of these, and a vertebrate or non-naturally-occurring HMGB B box. The HMGB polypeptide is preferably a HMGB polypeptide is preferably a HMGB be peptide and may be truncated at the C-terminus. The autoimmune disease is allergy, ulcerative colitis, Crohn's disease, asthma, rheumatoid arthritis, sportasis or systemic lugus erythematosus (all claimed). The present sequence is that of a mutated B box of human, mouse and rat HMGBI proteins ADY85326-ADY85327, which was produced in an example from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention provides antibodies, or their antigen-binding fragments, that bind to a vertebrate high mobility group box (HMGB) polypeptide, temethods of detecting and/or identifying an agent that binds to an HMGB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New antibody or its antigen-binding fragment specific to a vertebrate high mobility group box (HMGB) A box that inhibits release of a proinflammatory cytokine from a cell treated with HMGB protein, useful

polypeptide, methods of treating a condition in a subject characterized by activation of an inflammatory cytokine cascade, and methods of detecting an HWGB polypeptide in a sample. The antibody for antigenbinding fragment) binds to a vertebrate HWGB A box but does not specifically bind to non-A box epitopes of HWGB, and inhibits release of a proinflammatory cytokine from a vertebrate cell treated with an HWGB crotein. A method of treating a condition characterized by activation of an inflammatory cytokine cascade comprises administering an antibody of the invention, or its antigen-binding fragment. The condition is selected from sepsies, allograft rejection, arthritis, asthma, lupus, adult respiratory distress syndrome, chronic obstructive pulmonary disease, psoriasis, pancreatitis, peritonitis, burns, ischemia, Behcet's disease, graft versus host disease, inflammatory bowel disease, multiple sclerosis and cachexia, especially sepsis, arthritis, or lupus. The present sequence is that of the A box of human HWGB1 APY85012. An identical

that bind to a vertebrate high mobility group box (HMGB) polypeptide, to methods of detecting and/or identifying an agent that binds to an HMGB colypeptide, methods of treating a condition in a subject characterized by activation of an inflammatory cytokine cascade, and methods of detecting an HMGB polypeptide in a sample. The antibody (or antigenbinding fragment) binds to a vertebrate HMGB hox but does not specifically bind to non-A box epitopes of HMGB, and inhibits release of a proinflammatory cytokine from a vertebrate cell treated with an HMGB coprotein. A method of treating a condition characterized by activation of an inflammatory cytokine cascade comprises administering an antibody of the invention, or its antigen-binding fragment. The condition is selected from sepsis, allograft rejection, arthritis, asthma, lupus, adult respiratory distress syndromic obstructive pulmonary disease, psoriasis, peritonitis, burns, ischemia, Behcet's disease, psoriasis, peritonitis, burns, ischemia, Behcet's disease, cand cachexia, especially sepsis, arthritis, or lupus. The present sequence is that of the A box of human HMGB1. An identical sequence is also found in rat and mouse HMGB1.

The invention relates to high mobility group (HMG) protein comprising DNA binding motifs termed HMG A box and HMG B box. HMG A box or a nonnaturally occurring HMG A box inhibits the release of a pro-inflammatory cytokine from a vertebrate cell. The methods and compositions of the invention are useful for inhibiting a condition characterised by activation of an inflammatory cytokine cascade such as endotoxic shock, rheumatory cytokine cascade such as endotoxic shock, rheumatorid arthritis, appendictis, peptic or duodenal ulcers, Crohn's disease, peritonitis, hepatitis, asthma, allergy, immune complex disease, sinusitis, bronchitis, emphysema, HIV infection, candidisais, malaria, filariasis, amoebiasis, dermatitis, atherosclerosis, Alzheimer's disease, myocarditis, myocardial ischaemia, meningitis, multiple sclerosis, gout, cerebral infarction, neuritis, Goodpastures syndrome, graft-versus-host disease, diabetes and Hodgkin's disease. The invention is useful in gene therapy. The present sequence is human HMG1 (also termed as HMGB1)
inhibiting a condition associated with an activated inflammatory cytokine cascade, e.g. endotoxic shock, myocardial infarction, asthma, HIV infection, malaria and diabetes.

New pharmaceutical composition comprises a polypeptide comprising an HMGB B box or its functional variant, useful for stimulating or increasing an immune response in an individual or for treating cancer in an individual.

Example 1; SEQ ID NO 19; 68pp; English.

The invention describes a pharmaceutical composition comprising a polypeptide comprising an HMGB (high mobility group box) B box or its

```
ô
 The invention relates to a polypeptide comprising a high mobility group box protein (HMGB) A or B box. The HMGB A or B box can inhibit release of a proinflammatory cytokine from a cell treated with an HMGB protein. The invention also relates to a purified preparation of antibodies that specifically bind to the HMGB B box but do not specifically bind to one box epitopes of HMGB, where the antibodies can inhibit release of a proinflammatory cytokine from a cell treated with HMGB, a method for

functional variant to treat a disease or condition by increasing an immune response in an individual administered with the pharmaceutical composition. Also described are: an antibody attached to a polypeptide comprising an HWGB B box or its functional variant; stimulating or increasing an immune response in an individual in need of immunostimulation; and treating cancer in an individual. The composition is useful for stimulating or increasing an immune response in an individual in need of immunostimulation or for treating cancer in an individual. This is the amino acid sequence of a human high mobility group box 1 (HMGI) C-terminal mutant.
